correct way to use super (argument passing) - Stack Overflow Jan 23, 2012 · So I was following Python's Super Considered Harmful, and went to test out his examples. However, Example 1-3, which is supposed to show the correct way of calling super when handling `__init__` met... **python - What is the difference between super () with arguments ...** Sep 15, 2019 · In Python-3.x you generally don't need the arguments for super anymore. That's because they are inserted magically (see PEP 3135 -- New Super). The two argument call and the no-argument call are identical if: The first argument is the class in which the method (that uses super) is defined. In your case it's Ball so the condition is satisfied. and the second argument to super is the first ... **Why is super.super.method (); not allowed in Java?** Feb 25, 2009 · It's a nice trick but even that is not always equivalent to calling the unavailable, yet needed) super.super and that is because the super.super call would carry the context of C (C+B+A) whereas your answers creates an instance of A without the context of B and C. *How does Python's super () work with multiple inheritance?* In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. AttributeError: 'super' object has no attribute - *Stack Overflow* Jul 9, 2018 · I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: AttributeError: 'super' object has no attribute do_something class Parent: def `__init__` (self):... super () in Java - Stack Overflow Sep 22, 2010 · super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. **Understanding Python super() with `__init__` () methods** Feb 23, 2009 · Super simply guarantees we call the correct next class's method in the method resolution order, whereas the other way hard-codes the next method to be called, which makes cooperative multiple inheritance more difficult. *python - Using super with a class method - Stack Overflow* To reiterate: super(B, cls).do_your_stuff() causes A 's do_your_stuff method to be called with cls passed as the first argument. In order for that to work, A 's do_your_stuff has to be a class method. The linked page doesn't mention that, but that is definitively the case. *oop - What does 'super' do in Python? - Stack Overflow* Nov 3, 2015 · The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... coding style - Using "super" in C++ - Stack Overflow As for chaining super::super, as I mentionned in the question, I have still to find an interesting use to
