T&T Clark Handbook of Christian Theology and the Modern Sciences John P. Slattery, 2020-10-01 This handbook surveys the many relationships between scientific studies of the world around us and Christian concepts of the Divine from the ancient Greeks to modern ecotheology. From Augustine to Hildegard of Bingen, Genesis to Frederick Douglass, and physics to sociology, this volume opens the intersections of Christian theology and science to new concepts, voices, and futures. The central goal of the handbook is to bring new perspectives to the foreground of Christian theological engagement with science, and to highlight the many engagements today that are not often identified as 'science-theology' discussions. The handbook thus includes several aspects not found in previous handbooks on the same topic: significant representation from the three major branches of Christianity-Orthodox, Roman Catholic, and Protestant; multiple essays on areas of modern science not traditionally part of the "theology and science" dialogue, such as discussions of race, medicine, and sociology; a collection of essays on historical theologians' approaches to nature and science. T&T Clark Handbook to Christian Theology and the Modern Sciences is divided into 3 sections: historical explorations, encompassing a eleven chapters from Aristotle to Frederick Douglass; Catholic, Protestant, and Orthodox surveys of theology-science scholarship in the 20th and 21st centuries; and ten explorations in Christian theology today, from Einsteinian physics to decolonial sociology. The 24 chapters than span the volume offer the reader, whether scholar, student, or layperson, an essential resource for any future conversations around science and Christian theology.

MEDICAL LANGUAGE FOR MODERN HEALTH CARE DAVID. ALLAN, 2013

Multilingual Healthcare Christiane Hohenstein, Magdalène Lévy-Tödter, 2020-03-28 This volume is the first to address multilingual healthcare communication around the globe and focuses on institutional, social and linguistic challenges and resources of the healthcare industry. It comprises studies from Canada, Australia, South Africa, Greenland, Italy, Germany, Switzerland and Belgium, and aims to introduce new paths of communicative and methodological agendas, casting a critical view on current linguistic practices in healthcare, nursing and medical interactions. With increased personal mobility in a

global society, the need for multilingual staff is on the rise in medical institutions and healthcare organisations, and communicative competencies and practices involving different languages pose challenges for medical doctors, healthcare staff and patients alike. Many studies have highlighted the crucial role played by interpreters and interpreting staff, but the diversity of language situations in different countries requires very different approaches and solutions. Additionally, it may not be possible to develop a single agenda of language services for different medical areas with different needs for counselling, with various forms of treatment that require explanation and the patient's informed consent and with varying approaches to the relationship between medical professionals and patients. How to best organise medical (digital) language services in countries as different as South Africa, Greenland, Germany, Belgium and Australia calls for a diversity of possible solutions. The current volume makes a variety of such solutions and practices available for medical staff and healthcare institutions faced with international patients and working with international medical staff. It makes the challenges palpable on an international scale in a way that comparisons may be drawn between different solutions as well as their socio-cultural and institutional implications. This volume is intended for policy makers, medical and healthcare practitioners, institutions, interpreters, teachers and students in professional multilingual healthcare.

Medical Anthropology and the World System Hans A. Baer, Merrill Singer, Ida Susser, 2013-05-23 Now in its third edition, this textbook serves to frame understandings of health, health-related behavior, and health care in light of social and health inequality as well as structural violence. It also examines how the exercise of power in the health arena and in society overall impacts human health and well-being. *Medical Anthropology and the World System: Critical Perspectives, Third Edition* includes updated and expanded information on medical anthropology, resulting in an even more comprehensive resource for undergraduate students, graduate students, and researchers worldwide. As in the previous versions of this text, the authors provide insights from the perspective of critical medical anthropology, a well-established theoretical viewpoint from which faculty, researchers, and students study medical anthropology. It addresses the nature and scope of medical anthropology; the biosocial and political ecological origins of disease, health inequities, and social suffering; and the nature of medical systems in indigenous and pre-capitalist state societies and modern societies. The third edition also includes new material on the relationship between climate change and health. Finally, this textbook explores health praxis and the struggle for a healthy world.

Health Care and the Ethics of Encounter Laurie Zoloth, 2005-10-12 The last several years have seen a sharpening of debate in the United States regarding the problem of steadily increasing medical expenditures, as well as inflation in health

care costs, a scarcity of health care resources, and a lack of access for a growing number of people in the national health care system. Some observers suggest that we in fact face two crises: the crisis of scarce resources and the crisis of inadequate language in the discourse of ethics for framing a response. Laurie Zoloth offers a bold claim: to renew our chances of achieving social justice, she argues, we must turn to the Jewish tradition. That tradition envisions an ethics of conversational encounter that is deeply social and profoundly public, as well as offering resources for recovering a language of community that addresses the issues raised by the health care allocation debate. Constructing her argument around a careful analysis of selected classic and postmodern Jewish texts and a thoughtful examination of the Oregon health care reform plan, Zoloth encourages a radical rethinking of what has become familiar ground in debates on social justice.

The New Biology Michael J. Reiss,Michael Ruse,2023-06-20 In this accessible analysis, a philosopher and a science educator look at biological theory and society through a synthesis of mechanistic and organicist points of view to best understand the complexity of life and biological systems. The search for a unified framework for biology is as old as Plato's musings on natural order, which suggested that the universe itself is alive. But in the twentieth century, under the influence of genetics and microbiology, such organicist positions were largely set aside in favor of mechanical reductionism, by which life is explained by the movement of its parts. But can organisms truly be understood in mechanical terms, or do we need to view life from the perspective of whole organisms to make sense of biological complexity? The New Biology argues for the validity of holistic treatments from the perspectives of philosophy, history, and biology and outlines the largely unrecognized undercurrent of organicism that has persisted. Mechanistic biology has been invaluable in understanding a range of biological issues, but Michael Reiss and Michael Ruse contend that reductionism alone cannot answer all our questions about

life. Whether we are considering human health, ecology, or the relationship between sex and gender, we need to draw from both organicist and mechanistic frameworks. It's not always a matter of combining organicist and mechanistic perspectives, Reiss and Ruse argue. There is scope for a range of ways of understanding the complexity of life and biological systems. Organicist and mechanistic approaches are not simply hypotheses to be confirmed or refuted, but rather operate as metaphors for describing a universe of sublime intricacy.
