*How to force R to use a specified factor level as reference in a ...* You should do the data processing step outside of the model formula/fitting. When creating the factor from `b` you can specify the ordering of the levels using `factor(b, levels = c(3,1,2,4,5))`. Do this in a data processing step outside the `lm()` call though. My answer below uses the `relevel()` function so you can create a factor and then shift the reference level around to suit as you ... **Pandas - make a column dtype object or Factor - Stack Overflow** Mar 30, 2013 · In pandas, how can I convert a column of a DataFrame into dtype object? Or better yet, into a factor? (For those who speak R, in Python, how do I `as.factor()`?) Also, what's the difference between ... **r - Changing factor levels with dplyr mutate - Stack Overflow** Jan 28, 2015 · From my understanding, the currently accepted answer only changes the order of the factor levels, not the actual labels (i.e., how the levels of the factor are called). [r - ggplot2: Reorder items in a legend - Stack Overflow](#) Oct 12, 2021 · (2) I cannot find a question about ordering (of axis or legend elements) in ggplot2 that is not completely resolved by the use of `factor(., levels=)`. When you define the factor and specify the ordering of said factors using `levels=`, then ggplot2 tends to honor that specification. *Convert all data frame character columns to factors* Given a (pre-existing) data frame that has columns of various types, what is the simplest way to convert all its character columns to factors, without affecting any columns of other types? Here's an **Why use `as.factor()` instead of just `factor()` - Stack Overflow** The `table` function looks like an exception and I spot `factor` instead of `as.factor` inside. There might be some special consideration which is unfortunately not obvious to me when I inspect its source code. **How to count how many values per level in a given factor?** Sep 30, 2014 · How to count how many values per level in a given factor? Asked 10 years, 10 months ago Modified 3 years, 5 months ago Viewed 229k times [r - summarizing counts of a factor with dplyr - Stack Overflow](#) Sep 12, 2014 · I want to group a data frame by a column (owner) and output a new data frame that has counts of each type of a factor at each observation. The real data frame is fairly large, and there are 10 diff... [How to reorder factor levels in a tidy way? - Stack Overflow](#) Jul 17, 2017 · A couple comments: reordering a factor is modifying a data column. The dplyr command to modify a data column is `mutate`. All `arrange` does is re-order rows, this has no effect on the levels of the factor and hence no effect on the order of a legend or axis in ggplot. All factors have an order for their levels. The difference between an `ordered = TRUE` factor and a regular ... **How do I convert certain columns of a data frame to become ...** May 10, 2018 · Using a factor will require that all values are mapped to IDs behind the scenes, so

any print of your data.frame requires a lookup on those levels -- an extra step which takes time. Factors are great when storing strings which you don't want to store repeatedly, but would rather reference by their ID.
