Analytic and Strategic Approaches to the Development of International (European) Markets Patrizia Beier, 2007-05-03 Inhaltsangabe: Abstract: The objective of this thesis comprises the analytic and strategic approach to develop new and international markets based on the specific interest for the medium-sized US software company Pixel Magic Imaging, Inc. (PMI). PMI was in its infancy in terms of going international. In other words, PMI had neither an organized and international marketing conception nor a regular business to foreign customers and markets so far. Aim and object of this project was analyzing marketing opportunities for their product portfolio within different international markets and to approach adequate marketing strategies. Therefore data of international markets must be collected, evaluated and analyzed to put these results in a strategic order. This thesis deals with the development of foreign markets and how market entry could be realized. It focuses on explaining ways how to get there. The aim of this thesis is to prove which strategies are possible and to explain them in a general approach. The market research and defining the appropriate strategies were focused on the company's product portfolio. The products are digital imaging software and equipment and are placed in the segment for professional photographers, photographic entrepreneurs and retail outlets. The scope of duties in this thesis consisted in gathering data and compiling reports for international sales opportunities in so far unknown international markets. The study combines the theoretical approach with the know-how of working experience and expatiated the methodology of international marketing research, designing of an international marketing concept and the implementation of market strategies in describing the theoretical disciplines and to implement these results into the company's strategy focus and product portfolio. This thesis benefits from the empirical data gained and its success based on an intensive exchange of ideas from theory and practical work experience. Programming ML.NET Dino Esposito,Francesco Esposito,2022-02-03 The expert guide to creating production machine learning solutions with ML.NET! ML.NET brings the power of machine learning to all .NET developers— and Programming ML.NET helps you apply it in real production solutions. Modeled on Dino Esposito's best-selling Programming ASP.NET, this book takes the same scenario-based approach Microsoft's team used to build ML.NET itself. After a foundational overview of ML.NET's libraries, the authors illuminate mini-frameworks (“ML Tasks”) for regression, classification, ranking, anomaly detection, and more. For each ML Task, they offer insights for overcoming common real-world challenges. Finally, going far beyond shallow learning, the authors thoroughly introduce ML.NET neural networking. They present a complete example application demonstrating advanced Microsoft Azure cognitive services and a handmade custom Keras network— showing how to leverage popular Python tools within .NET. 14-time Microsoft MVP Dino Esposito and son Francesco Esposito show how to: Build smarter machine learning solutions that are closer to your user's needs See how ML.NET instantiates the classic ML pipeline, and simplifies common scenarios such as sentiment analysis, fraud detection, and price prediction Implement data processing and training, and “productionize” machine learning-based software solutions Move from basic prediction to more complex tasks, including categorization, anomaly detection, recommendations, and image classification Perform both binary and multiclass classification Use clustering and unsupervised learning to organize data into homogeneous groups Spot outliers to detect suspicious behavior, fraud, failing equipment, or other issues Make the most of ML.NET's powerful, flexible forecasting capabilities Implement the related functions of ranking, recommendation, and collaborative filtering Quickly build image classification solutions with ML.NET transfer learning Move to deep learning when standard algorithms and shallow learning aren't enough “Buy” neural networking via the Azure Cognitive Services API, or explore building your own with Keras and TensorFlow
