SUSPENSORY LIGAMENT DAMAGE - foundationequinenj.com The suspensory ligament supports the fetlock and protects it from hyperextension (dropping too low) at exercise. The ligament begins at the back of the upper cannon bone in both the fore and hind limbs. *Ultrasound Examination of the Suspensory Ligament* Before you start your ultrasound exam, make sure the horse is standing square and is weightbearing on the limb. No weightbearing images can also be taken of the proximal suspensory; however, they are less important in DSLD cases compared to the images of the body of the suspensory and the branches. *Proximal Suspensory Desmitis in the Forelimb and the Hindlimb* The suspensory ligament (SL) can be divided into three separate regions which are subject to injury: the proximal part, the body, and the branches. *Equine Veterinary Services* The suspensory is a ligament that begins at the base of the knee on the front leg and at the hock on the back leg. It runs down the back of the cannon bone, branching to the inside and outside of the fetlock where it attaches to the sesamoid bone. **Diagnosis and management of suspensory desmitis** The suspensory ligament is divided into three equal thirds by reason of its anatomical features and the nature of its injuries – proximal, body and branches. This so-called ligament is derived from the muscle and, in deference to its ancestry, retains some muscle tissue within its substance.

Suspensory Ligament Injuries in Horses - UC Davis What is a suspensory ligament? Where is it located? What does it do? How is it injured? This publication is intended to answer these questions for horse owners so they will better understand how such injuries affect a horse and why they can require many months to heal properly. **Shoeing the Horse with Tendon or Ligament Injury.** The challenge comes with horses that have asymmetric lesions, such as those with a medial or lateral collateral/suspensory ligament injury. In general, an asymmetric shoe is used with the width applied to the branch of the shoe on the injured side.
