A Guide to Performance and Efficiency Assessment of Industrial Equipment A. K. DAS, P. K. DAS, 2024-05-04 This book is written as a guide to industrial professionals, young engineers, entrepreneurs, and industrialists, and other stakeholders who need a huge energy in process industries in different forms through industrial/process equipment for several human needs. But the performance and efficiency of the equipment are not really taken care of during the operations and processes, which may be due to the dearth of proper knowledge or ignorance. Because of that, a large quantity of energy remains unutilized or wastage causing excess energy costs and subsequently generation of a huge quantity of carbon footprint indirectly which could be saved by proper performance and efficient management, and hence our Nature earth could be sustainable. In this book, the authors highlighted the performance and loss of efficiency of such industrial equipment during running. This attempt has been made to disseminate their sound, in-depth knowledge, and long experience achieved from several industries while working in different fields. The book explains the actual energy needed for performance, the reason for energy loss, and the scope of energy savings which can be possible by proper energy management. This book will also be apprehensible for all students of diploma, undergraduate & post graduate in the stream of electrical, mechanical, chemical, power, and all other engineering courses as a textbook as well as a reference book.

**Simplified Wastewater Treatment Plant Operations** Edward Haller, 1995-02-02 In a simple, straightforward manner, this book presents most of the major process units for wastewater treatment, addressing what the unit is and how it basically works. Along with that it provides some of the math problems associated with each unit. Each math problem, presented in English units, is usually followed by a nearly identical problem in

**Principles of Environmental Chemistry** James Girard, 2013 Written for science majors who have completed a general chemistry course, Principles of Environmental Chemistry, Third Edition enables students to understand the underlying chemical processes that are operating in the environment while demonstrating how difficult it is to measure these systems. It emphasizes that all living and nonliving parts of our environment are made up of chemicals and that all of the natural processes continuously occurring in the environment involve chemical reactions. With this concept of interdependence, students begin to see that without some understanding of chemistry, it is impossible to fully understand environmental issues such as ozone depletion, global warming, air and water pollution, and the hazards of radioactivity. The Third Edition includes

a new chapter on Green Chemistry as well as numerous updates throughout to address the changes in the field. Key Features:- Includes a new chapter on Green Chemistry.- A new key term glossary is now included at the end of the text.- New feature boxes assess students understanding of chapter material with analytical questions and problems.- Includes additional chemical equations throughout the text.- A new electronic student study guide and solutions manual is available with the third edition.- Instructor's resources include PowerPoint® Lecture Outlines, answers to end of chapter problems, and a testbank.- A student companion website includes chapter outlines, interactive glossary, flashcards, and weblinks.

**Toxicity Reduction and Toxicity Identification Evaluations for Effluents, Ambient Waters, and Other Aqueous Media** Teresa Norberg-King, 2005

Water and Air Effluents Treatment Handbook NPCS Board of Consultants & Engineers, 2009-10-01 Water treatment describes those processes used to make water more acceptable for a desired end use. These can include use as drinking

water, industrial processes, medical and many other uses. The goal of all water treatment process is to remove existing contaminants in the water, or reduce the concentration of such contaminants so the water becomes fit for its desired end use. Water quality analytical techniques are considered in the context of EEC directives on the quality of the aquatic control of all effluents is entering it. The principal methods of water analysis are reviewed and it indicated in view of destructive and hazardous role of pollution, it become necessary that the very nature of atmosphere, the various air effluent are present there to save the environment from the harmful effect. Effluent can be treated in different ways, it is classified as; preliminary treatment, primary treatment, secondary treatment and complete final treatment. Waste water obtained from industries is generally much more polluted than the domestic or even commercial waste water. Industrial wastewater cannot be always treated easily by the normal methods of treating domestic waste waters. Depending on the quantum, concentration, toxicity and presence of non biodegradable organics in an industrial wastewater, its treatment may consist of any one or more processes such as equalization, neutralization, physical treatment, chemical treatment and biological treatment. The atmosphere contains hundreds of air pollutants from natural or from anthropogenic sources. All such pollutants are called primary pollutants for example; sulphur oxides, carbon monoxide, nitrogen oxides, lead etc. Secondary pollutants are the chemical substances, which are produced from the chemical reactions of primary pollutants or due to their oxidation etc. A high growth in vehicle population brings in its wake urban air pollution problems unless timely appropriate steps to control vehicle emissions are under taken. Some of the fundamentals of the book are quality and characteristics of effluents, collection of sewage samples for physical and, chemical testing, disposing of effluents, disposal of wastewaters in lakes and management of lake waters, disposal of sewage effluents on land for irrigation, classification of treatment processes, treatment of industrial effluents, methods of treating industrial wastewaters, strategies for management of industrial wastes, combined industrial municipal wastes, a process for upgrading paper mill effluent by water hyacinth, ventilation for controlling indoor air pollution, the environment and its pollution, disposal of environmentally hazardous radioactive effluents and biomedical wastes, air pollution, its control and monitoring, fuels from waste etc. This book is an effort to put together the various options available to meet the water and air effluent available for the environmental protection. The book presents a concise but through an overview of state of technology for water and air effluent treatment. The water and air effluent treatments are organized into chapters by broad problem area, treatment of industrial effluent, industrial waste management, etc. This will be helpful to technocrats, consultants, educators, architects, industry executive, students and others concerned with saving environment problem.
