Growth and Development in Adulthood among Persons with Intellectual Disability Hefziba Lifshitz, 2020-03-23 This volume advocates an optimistic new conceptual and practical approach to adulthood, aging, and education for individuals with intellectual disability (ID) across the lifespan. The compensation age theory (CAT) at the heart of this book suggests that the adulthood period in populations with ID may be characterized by processes of cognitive development, growth, and neural sprouting, rather than stagnation or even decline. Empirical findings indicate the contribution of chronological age, maturity,

and accumulating life experiences to adults' continued cognitive growth and intelligence, as a result of direct mediation, cognitive intervention, and academic learning as well as exposure to indirect learning. Grounded in cumulative evidence for the CAT, the book presents comprehensive analysis of a practical holistic educational intervention model for enhancing adults' Cognition (literacy), Affect (including autonomy), and Behavior (adaptive behavior skills), including operative strategies, mediational parameters, and guidance for change agents in diverse settings. This triple CAB model offers detailed tools for promoting the cognitive improvement and invigoration of adults with ID in during ADL, vocational and leisure activities, at all severity levels ranging from mild and moderate to severe and profound, across different ID etiologies including Down syndrome, and even at advanced ages for adults with ID exhibiting comorbid Alzheimer's.

Schmidt, I-Min Lee, 2021-03-08 Physical Activity Epidemiology, Third Edition, provides a discussion of current studies showing the influence of physical activity on disease. Updated with extensive new content in alignment with the 2018 Physical Activity Guidelines Advisory Committee Scientific Report, the third edition benefits from the expertise of authors Rod Dishman, Gregory Heath, Michael Schmidt, and I-Min Lee. These authors offer insight gained from their professional experiences, which include leadership roles within the Centers for Disease Control and Prevention, contributions to the 2008 Physical Activity Guidelines for Americans, and a combined 1,000 peer-reviewed articles in high-impact journals across each of their disciplines. The text summarizes the available knowledge, examines the methods used to obtain these findings, considers the implications for public health, and outlines the important questions that remain. Readers will find comprehensive discussions of these topics: Part I introduces physical activity epidemiology and provides an extensive background in research methods as well as physical activity measurement and surveillance. Part II focuses on the evidence that physical activity protects against premature death from all causes and inhibits the development of coronary heart disease and stroke. Part III offers population-based studies and clinical experiments providing evidence that physical activity plays a role in the prevention of hypertension, dyslipidemia, and obesity. Part IV compiles the latest data on two chronic diseases that are increasing in prevalence worldwide: type 2 diabetes and osteoporosis. Part V describes the evidence that physical activity is associated with reduced risks of certain cancers and explores the use of immunotherapy in cancer treatment. Part VI addresses mental health and the promotion of a safe, physically active lifestyle among all segments of the population. The third edition of this text offers expanded coverage of the measurement of sedentary behavior; the effects of physical activity on osteoporosis and bone health, cancers, and inflammatory diseases; and the potential of exercise to complement immunotherapy in cancer treatment. More than 200 tables and figures highlight information in an easy-to-understand visual format. Physical Activity Epidemiology, Third Edition, examines the methodology and findings of classic and contemporary studies and then helps students analyze the results. The special Strength of the Evidence sections summarize the findings to determine the extent to which correlation and causation can be proven. Chapter objectives, chapter summaries, sidebars, and a glossary assist students in finding key information. Instructors will find a test package, image bank, and downloadable learning activities to assist with student comprehension. Physical Activity Epidemiology, Third Edition, offers a comprehensive presentation of significant studies, discusses how these studies contribute to understanding the relationship between activity and disease prevention, and explores how this information can be used in leading global society toward increased health and longevity.

Infant and Early Childhood Mental Health Kristie Brandt, Bruce D. Perry, Stephen Seligman, Ed Tronick, 2014-10-03 *Infant and Early Childhood Mental Health: Core Concepts and Clinical Practice* is a groundbreaking book that provides an overview of the field from both theoretical and clinical viewpoints. The editors and chapter authors -- some of the field's foremost researchers and teachers -- describe from their diverse perspectives key concepts fundamental to infant-parent and early childhood mental health work. The complexity of this emerging field demands an interdisciplinary approach, and the book provides a clear, comprehensive, and coherent text with an abundance of clinical applications to increase understanding and help the reader to integrate the concepts into clinical practice. Offering both cutting-edge coverage and a format that facilitates learning, the book boasts the following features and content: A focus on helping working professionals expand their specialization skills and knowledge and on offering core competency training for those entering the field, which reflects the Infant-Parent Mental Health Postgraduate Certificate Program (IPMHPCP) and Fellowship in Napa, CA that was the genesis of the book. Chapters written by a diverse group of authors with vastly different training, expertise, and clinical experience, underscoring the book's interdisciplinary approach. In addition, terms such as clinician, therapist, provider, professional, and teacher are intentionally used interchangeably to describe and unify the field. Explication and analysis of a variety of therapeutic models, including Perry's Neurosequential Model of Therapeutics; Brazelton's neurodevelopmental and relational Touchpoints; attachment theory; the Neurorelational Framework; Mindsight; and Downing's Video Intervention Therapy. An entire chapter devoted to diagnostic schemas for children ages 0--5, which highlights the Diagnostic Classification of Mental Health Disorders of Infancy and Early Childhood: Revised (DC:0-3R). With the release of DSM-5, this

chapter provides a prototypical crosswalk between DC:0-3R and ICD codes. A discussion of the difference between evidence-based treatments and evidence-based practices in the field, along with valuable information on randomized controlled trials, a research standard that, while often not feasible or ethically permissible in infant mental health work, remains a standard applied to the field. Key points and references at the end of each chapter, and generous use of figures, tables, and other resources to enhance learning. The volume editors and authors are passionate about the pressing need for further research and the acquisition and application of new knowledge to support the health and well-being of individuals, families, and communities. *Infant and Early Childhood Mental Health: Core Concepts and Clinical Practice* should find a receptive audience for this critically important message.

- offers insight into delivery of leisure services in older adult communities and long-term care environments.

Each chapter features learning objectives, study questions, case studies, exercises, and relevant readings. The book is supplemented by online ancillaries, including an instructor guide, test package, and a presentation package with photos, illustrations, and tables from the text. Together, the text and online ancillaries help students connect theories and practice as they prepare for future roles in their chosen fields. *Leisure and Aging* is presented in five sections. Part III explores the effects of aging on physical, psychological, social, and spiritual well-being and health. Parts IV and V delve into the role of community in aging and leisure and long-term care and leisure. Written for undergraduate students, professors, and professionals in recreation, leisure, gerontology, and aging, *Leisure and Aging* provides a wealth of knowledge on various aspects of life for older people and the role of leisure in their lives. Effects of Game and Game-like Training on Neurocognitive Plasticity Guido P. H. Band, Chandramallika Basak, Heleen A. Slagter, Michelle W. Voss, 2016-05-17 Cognitive training is not always effective. This is also the case for the form of cognitive training that this Research Topic focuses on: prolonged performance on game-like cognitive tasks. The ultimate goal of this cognitive training is to improve ecologically-valid target functions. For example, cognitive training should help children with ADHD to stay focused at school, or help older adults to manage the complexity of daily life. However, so far this goal has proven too ambitious. Transfer from trained to non-trained tasks is not even guaranteed in a laboratory, so there is a strong need for understanding how, when and for how long cognitive training has effect. Which cognitive functions are amenable to

game training, for whom, and how? Are there mediating factors for success, such as motivation, attention, or age? Are the improvements real, or can they be attributed to nonspecific factors, such as outcome expectancy or demand characteristics? Are there better strategies to improve cognitive functions through game training? This Research Topic of Frontiers in Human Neuroscience charts current insights in the determinants of success of game training.
