

Haccp Aplicado En La Elaboracion De Yogurt

Hans Christian Wolf Ossa, Universidad de Concepción (Chile). Unidad Académica Los Angeles

Propuesta de un sistema de análisis de peligros y puntos de control críticos (HACCP) para la elaboración de yogurt de fresa Samuel Angel Huanca Mamani, 2005 El objetivo del presente trabajo de investigación es la propuesta de un sistema de análisis de peligros y puntos de control críticos para la Elaboración de yogurt de Fresa, identificando los puntos de control críticos, y el establecer los límites críticos de control durante el proceso. Adicionalmente se hizo la estimación del costo de calidad a través del cuestionario de IMECCA (1994), donde alcanza un total de 147 puntos y esta significa una categoría moderado con un puntaje de las ventas totales de 8.97 por ciento, lo cual indica que su gestión está orientada a la evaluación. En la inspección de condición higiénico sanitarios se alcanzó a 528 puntos que equivale a 66 por ciento mostrado que los requerimientos tienen deficiencias, esto significa un grado de perfección aceptable, obteniendo la categoría de regular.

Aplicación del Sistema HACCP Maria Alejandra Speranza, Pablo Gualdieri, 2014-03 El Analisis de Peligros y Puntos Criticos de Control conocido como HACCP es un sistema que permite identificar, evaluar y controlar peligros significativos para la inocuidad de los alimentos. Estos peligros estan asociados con las materias primas y la elaboracion, envasado, almacenamiento, comercializacion y distribucion de un alimento hasta el consumo final. El objetivo de este trabajo fue disenar un Plan HACCP que permita el control de las etapas criticas aplicable a una linea existente de elaboracion de queso mozzarella en una empresa lactea instalada en la zona oeste de la provincia de Buenos Aires. La implementacion de este Plan se basa en las Directrices delCodigo Alimentario Argentino para la aplicacion del sistema HACCP y el estudio de diagnostico en la planta respecto al cumplimiento de los prerrequisitos; las Buenas Practicas de Manufactura (BPM) y los Procedimientos Operativos Estandarizados de Saneamiento (POEs). Al aplicarse los 7 principios del sistema HACCP se encontraron dos Puntos Criticos de Control: la pasteurizacion y el detector de metales y se implementaron.

Manual de Aplicación de Haccp en Industrias de Aceites de Oliv Delia Beatriz Pappano, Roxana Aciar, 2012-04 El sistema de calidad HACCP, es un sistema de gestion de calidad abierto y especifico para cada producto y proceso productivo, reconocido internacionalmente para abordar los peligros biologicos, quimicos y fisicos mediante la prevision y prevencion en lugar de la inspeccion y comprobacion final del producto. Por ser un sistema abierto y definido solo por las caracteristicas del producto y su proceso, es importante para su efectiva aplicacion la regulacion de los peligros de cada uno de ellos a fin de no

dejar librado a la subjetividad del implementador su determinación. En la implementación por etapas del sistema HACCP, se trabaja con el árbol de decisiones para la identificación de los PCC, tarea que parece ser sencilla ya que si se siguen las preguntas en el orden dado, todo estaría resuelto, pero por el contrario esta simplificación producto de la amplitud de la norma, puede generar un sistema en donde sobreabunden los PCC porque todo parece ser un riesgo potencial, o por el contrario nada es riesgoso en el proceso de elaboración.

Implementación del sistema HACCP en el proceso de packing de manzanas frescas de Frutícola Angol S. A. Hans Christian Wolf Ossa, Universidad de Concepción (Chile). Unidad Académica Los Angeles, 2007 El sistema HACCP, es un sistema que permite identificar peligros y medidas para su control con el fin de garantizar la inocuidad de los alimentos, desde la producción primaria hasta el producto final. Es un instrumento para evaluar los peligros y establecer sistemas de control, que se centran en la prevención. Frutícola Angol S. A. es una empresa que presta servicios de packing y almacenamiento de fruta fresca. Esta empresa asumió como política la excelencia en la calidad de sus procesos y servicios, lo cual se debe garantizar a través de la implantación de sistemas de calidad reconocidos internacionalmente. En el marco de lo anterior se proyectó para la temporada de exportación de manzanas 2007 implementar el sistema HACCP basado en las directrices de la norma chilena 2861 (Oficial año 2004).
