Diseño de interiores Francis D.K. Ching, Corky Binggeli, 2023-10-04 Bajo el sello inconfundible del maestro del dibujo arquitectónico Francis D. K. Ching, este manual proporciona una magnífica introducción al diseño del espacio interior a través de explicaciones gráficas muy accesibles. En la primera parte del libro, el lector se adentrará en los fundamentos y especificidades del espacio interior y de su diseño, entrando en contacto con cuestiones como las estructuras, las formas y los elementos básicos del espacio interior, así como el proyecto de diseño y la representación visual de los trabajos de interiorismo. En la segunda parte, los autores se detienen en cada uno de los elementos del diseño (desde los elementos estructurales, hasta los acabados y el mobiliario) para explorar sus características funcionales, expresivas y estéticas. Esta es la tercera edición ampliada y revisada de un manual ya clásico, dirigido tanto a estudiantes como a profesionales, que nos introduce de forma muy visual en la especialidad del diseño de interiores.

Sistemas de habitabilidad: principios técnicos del proyecto de arquitectura Rafael Villazón Godoy, David Felipe Rodríguez, 2021-04-01 La arquitectura es un artificio que actúa como interfaz entre la naturaleza y el ser humano. La

naturaleza genera diversas acciones ambientales que inciden de manera directa sobre la arquitectura, y esta se traduce en una envolvente que tiene que procesarlas para traducirlas en un espacio habitable (véase figura 1). Este concepto, en apariencia elemental, supone diversas operaciones complejas que permiten que el ser humano, con la sensibilidad que lo caracteriza, pueda sobrevivir en un espacio estable y confortable. Figura 1. La arquitectura como artificio frente a las acciones ambientales* La envolvente arquitectónica tiene como objetivo traducir las acciones ambientales —como la gravedad, el sonido, la luz, el aire, el agua y la radiación— en indicadores tangibles asociados al espacio arquitectónico: • La función estructural (gravedad) • El confort acústico (sonido) • El confort lumínico y visual (luz) • El confort térmico (aire y radiación) • La estanqueidad (agua) La técnica incluye los diferentes procedimientos que permiten ordenar la materia por medio de la construcción, para responder a las acciones ambientales y generar un espacio estable (función estructural), estanco y habitable (confort acústico, lumínico y térmico). La técnica es un concepto complejo que hace posible conectar de forma simultánea elementos racionales asociados a la lógica, una actitud de respeto a la naturaleza, al ser humano y la comunidad, fundamentada en la ética, y un resultado plástico que es reflejo de la búsqueda constante de generar una empatía profunda entre el espacio y sus usuarios, todo mediado por la estética (véase figura 2)

Arquitecturas Neocoloniales Francisco Ramírez Potes, 2018-07-05 En los años 30 en Cali empezó una verdadera carrera urbanizadora más allá de sus viejos límites, al tiempo que se realizaban una serie de obras importantes para la celebración de sus cuatrocientos años. El tratado de nuevas avenidas, la construcción de un bosque municipal, la configuración definitiva de los espacios alrededor del río, la arborización de las calles, la construcción de monumentos, la restauración de la Torre Mudéjar, la construcción de escuelas, hospicios, etc., fueron entre muchas, las tareas adelantadas o al menos propuestas, en 1936. La arquitectura residencial y de muchos edificios públicos obedeció a un gusto que se inclinó por algunas premisas funcionales modernas (en la organización no-tipológica de los espacios), compositivas (como la descomposición del volumen), urbanas (casas aisladas en medio de jardines) y técnicas de la arquitectura moderna, pero incorporando techos de teja, columnas y dinteles en piedra, arcadas, balcones y porches, cuidadosa cerrajería, elaborada carpintería, acabados rugosos en paredes, etc. Para muchos, la arquitectura residencial de estos años y el urbanismo que lo acompañó, constituyó la más amable imagen de la ciudad pues fueron sensibles a la topografía, al paisaje y el clima de Cali: cuando los barrios incluyeron calles arborizadas, patios y antejardines, y el trazado vial según los caprichos de la geografía. La demanda de este tipo de arquitectura y su relación con la naturaleza fué tan intensa que se mantuvo hasta bien entrados los años 50, obligando incluso a los más radicales promotores de la arquitectura moderna a realizar proyectos de este tipo. En Cali todas estas arquitecturas suelen ser conocidas hoy como estilo español californiano, una de las versiones del amplio movimiento que constituyeron las arquitecturas neo-coloniales que se manifestaron, con variaciones formales distintas referencias, desde Argentina y Chile hasta California y Florida, en Estados Unidos. Verdadera alternativa al eclecticismo académico europeo,

nacida de un espíritu americanista que recorrió toda Latinoamérica, las arquitecturas neocoloniales fueron un campo de creación intenso, de interpretación de las peculiaridades regionales (culturales y materiales, técnicas y ambientales) y durante un muy buen tiempo, trascendieron su contexto de origen y se convirtieron en una opción distinta la arquitectura internacionalista del Movimiento Moderno, pues respondían a expectativas de tipo cultural-regional a las que esté, en un principio, no proveía respuestas.

6th International Conference on the Conservation of Earthen Architecture The Getty Conservation Institute, 1991-02-28
On October 14-19, 1990, the 6th International Conference on the Conservation of Earthen Architecture was held in Las Cruces, New Mexico. Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

BIOCONSTRUCCIÓN ÁNGEL MARTÍNEZ, 2015-06-10 Este libro muestra una visión amplia del mundo de la bioconstrucción, y acerca a cualquiera que lo desee al arte de crear espacios saludables, ecológicos y armoniosos. La estructura de los capítulos sigue paso a paso el desarrollo de un edificio: el nacimiento de la idea, la ubicación, la búsqueda de quienes van a intervenir en el proyecto, su desarrollo, la contratación, la construcción, los acabados, la decoración, etc., hasta su total materialización. Materiales sanos, diseños armoniosos, formas creativas y espacios de luz y color son algunos de los criterios esenciales para crear nuestro espacio vital. Todos tenemos el derecho a habitar espacios que ofrezcan las cualidades vitales que se desarrollan en este libro, y ahora podemos descubrir cómo lograrlo. Desde la elección del lugar hasta el desarrollo de todo el edificio veremos la forma de construir un espacio habitable o de remodelarlo con criterios de respeto a la salud y al medioambiente.
