

Balance De Materia Y Energia Monsalvo

Rudi Primo Stivalet

Balance de Materia y Energía Raúl Monsalvo Vázquez, María Guadalupe Miranda Pascual, María Del Rocío Romero Sánchez, Graciela Muñoz Perez, 2014-10-21 En este texto el lector encontrará los principios fundamentales y técnicos de los balances de la materia y la energía, así como de las operaciones y procesos unitarios que se emplean en las industrias química, de alimentos, ambiental y del petróleo. De esta forma, el lector se familiarizará con un buen número de temas que le serán útiles durante todos sus estudios y vida profesional. Uno de los aspectos más importantes de la obra, es que los autores proponen una metodología para la solución de los problemas, con la idea de que el estudiante no se preocupe tanto por las matemáticas, sino que se enfoque en entender realmente los procesos y sea capaz de resolver diferentes situaciones que se le presentarán en la industria durante su vida profesional. En cada capítulo se podrá encontrar gran variedad de imágenes, esquemas, ejemplos, problemas (se proporcionan las respuestas de algunos de ellos; así se logra cierto grado de práctica en la aplicación de los conceptos) y temas de actualidad que vinculan los conceptos teóricos con situaciones que se viven día a día en nuestra vida, como por ejemplo los problemas de contaminación en China durante los pasados juegos olímpicos.

Problemas resueltos de fisicoquímica Raúl Monsalvo Vázquez, Luis Alberto Pérez Monroy, 2020-05-21 Esta obra ha sido escrita como apoyo para los cursos de Fisicoquímica que se imparten en las áreas de la Química y la Ingeniería Química, y con este propósito presenta los conceptos fundamentales y las técnicas de cálculo básicas de la Termodinámica, la Termofísica y la Termoquímica. Con el fin de hacer de este libro una herramienta lo más didáctica posible, la selección de los problemas incluidos y la detallada solución presentada de cada uno de ellos fueron elaboradas a partir de la experiencia adquirida por ambos autores en la impartición de esta materia. Además de ser resueltos con todo detalle todos los problemas presentados, al principio de cada capítulo se expone la teoría básica correspondiente. Aprenda: a aplicar la teoría fundamental de la Fisicoquímica en la solución de problemas concretos de esta materia. Conozca: las técnicas de solución más importantes de los problemas de la Fisicoquímica. Raúl Monsalvo Vázquez obtuvo el grado de Doctor en Ciencias Químicas con Especialidades en Estadística práctica para el Análisis de Datos y Control Total de la Calidad en la UNAM, es consultor en las áreas de Gestión de Procesos y Diseño Organizacional en el sector público, privado y social, e imparte la cátedra de Procesos Industriales y de temas relacionados con la Fisicoquímica en la Unidad Profesional Interdisciplinaria de Ingeniería y Ciencias Sociales y Administrativas del IPN. Luis Alberto Pérez Monroy es Ingeniero Químico Industrial

egresado del Instituto Politécnico Nacional, es especialista certificado en diseño, simulación y control de reactores químicos, posee experiencia en el ramo de la industria metal mecánica e inyección de plástico, y es catedrático en el área de Físicoquímica en la Unidad Profesional Interdisciplinaria de Ingeniería y Ciencias Sociales y Administrativas del IPN.

BALANCE de MATERIA. Tomo Uno BEN-HUR VALENCIA VALENCIA, 2017-04-05 Se presenta un método sencillo y general para analizar procesos y resolver cualquier problema de Balance de Materia, sin importar el número de Unidades del Proceso o el grado de complejidad. Se demuestra que lo primero que debe conocerse en la solución de un problema de balance es si este tiene solución y para ello se utilizan los Grados de Libertad del Proceso. Se demuestra de manera exhaustiva qué son y de dónde salen los Grados de Libertad en Operaciones Unitarias y Procesos Unitarios, mostrando que el Balance de Materia es solo otra visión de la Estequiometría. Se hace uso del concepto de Grados de Libertad aplicados exclusivamente a todo el Proceso, utilizando las ventajas de las calculadoras y los programas especializados para resolver sistemas de n ecuaciones con n incógnitas. Se presenta la fracción molar elemental como una alternativa para resolver problemas con combustibles. Mediante el método se eliminan muchos de los problemas que se presentan al resolver ejercicios de balance: Dónde tomar la Base de Cálculo, el cambio de Base, la Tabla de Grados de Libertad de las Unidades individuales, la solución secuencial, la estrategia de solución, el complicado tema de arrastre de variables, la Tabla de Balances, los balances en el Proceso Global, la Relación de Escalado, etc. Se analizan la solución de Balances de Materia en

Procesos en equilibrio químico, tema tratado en muy pocos textos y que requieren de Excell o Matlab cuando lo hacen. Se presenta un análisis amplio sobre Procesos Sobre-especificados, utilizando la eliminación de ecuaciones o la Adición de incógnitas como procedimientos para estudiar la posible contradicción de la información que sobra, encontrándose que pueden originarse diferentes soluciones a un mismo Ejercicio de Balance de Materia. Se muestra la forma de analizar Procesos Sub-especificados y de hallar valores parciales para las variables del Proceso, tema no tratado en ningún texto de Balance de Materia. El trabajo consta de 150 ejercicios resueltos, tomados de los textos tradicionales de Balances (Himmelblau, Felder-Rousseau) y de los buenos textos de Balances (Reklaitis, Murphy), desarrollando un método aplicable, desde procesos sencillos que constan de una sola Unidad hasta Procesos complejos formados por cientos de Unidades. Mismo método que se utiliza para resolver el Balance de Materia de una planta de ácido sulfúrico existente en la ciudad de Manizales. A partir de los ejercicios resueltos se presentan más de 1300 ejercicios propuestos, constituyendo una herramienta para la enseñanza del Balance de Materia.
