suelos derivados de cenizas volcánicas, cuya muestra representativa son la mayoría de suelos de Popayán, son de mucha importancia ya que se encuentran comúnmente en las zonas de mayor densidad poblacional de Colombia, sobre las cuales se cimientan todo tipo de obras de infraestructura. Este tipo de suelos derivados de cenizas volcánicas además de ser suelos tropicales, no encajan bien en la literatura clásica de la mecánica de suelos, su comportamiento es de difícil comprensión y por ello es fundamento de estudio, debido a que presentan fuertes cambios en su comportamiento al ser expuestos a factores por variaciones limatológicas, lo cual implica inconvenientes en el área de la ingeniería y construcción si no son tomados en cuenta en el proceso de diseño; estos problemas van desde tendencias a presentar elevados asentamientos, colapso e inestabilidad de las estructuras cimentadas sobre ellas a demás dificultades geotécnicas, por lo cual , este tipo de suelo merece ser estudiado y entendido de una forma más completa.
