Thakor, 2025-02-13 Written for the MBA or undergraduate first course in finance, as well as follow-on courses, this textbook provides a clear, accessible, and thorough explanation of the principles of finance; how they connect to real-world practice and how they are used to solve problems. Structured around ten unifying principles representing the core tenets of the science, this book imparts basic financial concepts irrespective of the institutional framework, ensuring that students learn about finance in a way that is applicable both now and into the future. Pedagogical features include learning objectives and major takeaways, applications in the world of business, numerous worked examples, key equation boxes highlighting the most important financial equations, quick check questions with solutions, key finance terms with a detailed glossary, and more than 380 homework problems. Online resources include a solutions manual, detailed instructor manual to adapt the book to your course, lectures slides and an 800 question test bank for instructors.

Finance Zvi Bodie, Robert C. Merton, 2000 For undergraduate Corporate Finance, MBA Finance course, and Financial Economics. This significant new finance text has a broader scope and greater emphasis on general principles than most other introductory finance texts, which typically focus exclusively on corporate finance. This text incorporates Corporate Finance, investments, and institutions. Acclaimed authors Bodie and Merton offer an approach balanced among the three pillars of finance--optimization over time, asset valuation, and risk management. The book encompasses all subfields of finance within a single unifying conceptual framework, and offers the big picture of resource allocation over time under conditions of uncertainty.

Financial Economics Bodie, 2008-09

Robert C. Merton and the Science of Finance: A Collection Luis Garcia-Feijóo, Laurence B. Siegel, Timothy R. Kohn, 2020 In 2019, MIT hosted a 75th birthday symposium in honor of Robert C. Merton. The event included presentations by students and colleagues explaining the influence Merton has had on the profession and on their ideas. Each presenter focused on a specific aspect of Merton's life and contributions so that the audience could gain a full picture of Merton's influence while avoiding repetition across presentations. The brief contains edited transcripts of some of the speeches and panel discussions that took place at the symposium. The presentations cover Merton's career, highlighting both his foundational work on

continuous time finance and the functional approach to understanding organizations as well as recent work on retirement security and trust. Some of the presentations unveil new aspects of his life. Merton's father, Robert K. Merton, was one of the most important sociologists of the 20th century, being the originator of concepts such as role model, unanticipated consequences, and self-fulfilling prophecies. Another of the presentations makes a convincing case for Merton as the first financial engineer; the presenter argues that a body of knowledge becomes a science when a field of engineering emerges from it. If that is the case, this brief achieves two goals. It celebrates the influence of Merton on the theory and practice of finance through a series of engaging presentations, and it traces the birth of finance as a science on its own.

Finance and the Behavioral Prospect James Ming Chen, 2016-10-01 This book explains how investor behavior, from mental accounting to the combustible interplay of hope and fear, affects financial economics. The transformation of portfolio theory begins with the identification of anomalies. Gaps in perception and behavioral departures from rationality spur momentum, irrational exuberance, and speculative bubbles. Behavioral accounting undermines the rational premises of mathematical finance. Assets and portfolios are imbued with "affect." Positive and negative emotions warp investment decisions. Whether hedging against intertemporal changes in their ability to bear risk or climbing a psychological hierarchy of needs, investors arrange their portfolios and financial affairs according to emotions and perceptions. Risk aversion and life-cycle theories of consumption provide possible solutions to the equity premium puzzle, an iconic financial mystery. Prospect theory has questioned the cogency of the efficient capital markets hypothesis. Behavioral portfolio theory arises from a psychological account of security, potential, and aspiration.
