Astronomy and Civilization in the New Enlightenment Anna-Teresa Tymieniecka,Attila Grandpierre,2010-11-18 This volume represents the first which interfaces with astronomy as the fulcrum of the sciences. It gives full expression to the human passion for the skies. Advancing human civilization has unfolded and matured this passion into the comprehensive science of astronomy. Advancing science's quest for the first principles of existence meets the ontopoietic generative logos of life, the focal point of the New Enlightenment. It presents numerous perspectives illustrating how the interplay between human beings and the celestial realm has informed civilizational trends. Scholars and philosophers debate in physics and biology, the findings of which are opening a more inclusive, wider picture of the universe. The different models of the universal order and of life here presented, all aiming at the first principles of existence—accord with the phenomenology/ontopoiesis of life within the logos-prompted primogenital stream of becoming and action, which points to a future of progressing culture.

The Oxford Companion to Shakespeare Michael Dobson,Stanley Wells,Will Sharpe,Erin Sullivan,2015-10-15 The Oxford Companion to Shakespeare is the most comprehensive reference work available on Shakespeare's life, times, works, and his 400-year global legacy. In addition to the authoritative A-Z entries, it includes nearly 100 illustrations, a chronology, a guide to further reading, a thematic contents list, and special feature entries on each of Shakespeare's works. Tying in with the 400th anniversary of Shakespeare's death, this much-loved Companion has been revised and updated, reflecting developments and discoveries made in recent years and to cover the performance, interpretation, and the influence of

Shakespeare's works up to the present day. First published in 2001, the online edition was revised in 2011, with updates to over 200 entries plus 16 new entries. These online updates appear in print for the first time in this second edition, along with a further 35,000 new and revised words. These include more than 80 new entries, ranging from important performers, directors, and scholars (such as Lucy Bailey, Samuel West, and Alfredo Michel Modenessi), to topics as diverse as Shakespeare in the digital age and the ubiquity of plants in Shakespeare's works, to the interpretation of Shakespeare globally, from Finland to Iraq. To make information on Shakespeare's major works easier to find, the feature entries have been grouped and placed in a centre section (fully cross-referenced from the A-Z). The thematic listing of entries - described in the press as 'an invaluable panorama of the contents' - has been updated to include all of the new entries. This edition contains a preface written by much-lauded Shakespearian actor Simon Russell Beale. Full of both entertaining trivia and scholarly detail, this authoritative Companion will delight the browser and reward students, academics, as well as anyone wanting to know more about Shakespeare.

Literature in the Age of Celestial Discovery Judy A. Hayden, 2016-04-08 The reconfiguration and relinquishing of one's conviction in a world system long held to be finite required for many in the sixteenth and seventeenth centuries a compromise in one's beliefs and the biblical authority on which he or she had relied - and this did not come without serious and complex challenges. Advances in astronomy, such as the theories of Copernicus, the development of the telescope, and Galileo's discoveries and descriptions of the moon sparked intense debate in Early Modern literary discourse. The essays in this collection demonstrate that this discourse not only stimulated international discussion about lunar voyages and otherworldly habitation, but it also developed a political context in which these new discoveries and theories could correspond metaphorically to New World exploration and colonization, to socio-political unrest, and even to kingship and regicide.
