

Viaggio Di Un Naturalista Intorno Al Mondo

Ugo Rabbeno

Bibliography of Natural History Travel Narratives Anne S. Troelstra, 2017-06-01 Anne Troelstra's fine bibliography is an outstanding and ground-breaking work. He has provided the academic world with a long-needed bibliographical record of human endeavour in the field of the natural sciences. The travel narratives listed here encompass all aspects of the natural world in every part of the globe, but are especially concerned with its fauna, flora and fossil remains. Such eyewitness accounts have always fascinated their readers, but they were never written solely for entertainment: fragmentary though they often are, these narratives of travel and exploration are of immense importance for our scientific understanding of life on earth, providing us with a window on an ever changing, and often vanishing, natural world. Without such records of the past we could not track, document or understand the significance of changes that are so important for the study of zoogeography. With this book Troelstra gives us a superb overview of natural history travel narratives. The well over four thousand detailed entries, ranging over four centuries and all major western European languages, are drawn from a wide range of sources and include both printed books and periodical contributions. While no subject bibliography by a single author can attain absolute completeness, Troelstra's work is comprehensive to a truly remarkable degree. The entries are arranged alphabetically by author and chronologically, by the year of first publication, under the author's name. A brief biography, with the scope and range of their work, is given for each author; every title is set in context, the contents - including illustrations - are described and all known editions and translations are cited. In addition, there is a geographical index that cross refers between authors and the regions visited, and a full list of the bibliographical and biographical sources used in compiling the bibliography.

Darwin Janet Browne, 2018-11-16 T00:00:00+01:00 A ben oltre un secolo dalla sua morte, le idee di Charles Darwin sono ancora in grado di ispirare scoperte scientifiche, ma di suscitare anche accesi e violenti dibattiti, quasi sempre di natura ideologica. Ma chi era veramente Darwin? E, soprattutto, in quale contesto storico- culturale nacque e maturò la sua rivoluzionaria teoria dell'evoluzione delle specie per selezione naturale? È proprio a queste domande che dà risposta la biografia di Janet Browne, restituendo un'immagine quanto mai vivida e a tutto tondo di Darwin. Una biografia definitiva dell'uomo e dello scienziato, che dipana l'enigma centrale della sua carriera, ovvero come questo tipico gentiluomo inglese di provincia finì per diventare un pensatore capace di sfidare i principi fondamentali della scienza e della religione. Janet

Browne racconta ogni minimo dettaglio della vita di Darwin: dall'infanzia alla formazione, dall'avventurosa storia del viaggio intorno al mondo sul Beagle (1831-1836) alla pubblicazione dell'Origine delle specie (1859), il suo capolavoro, e dell'Origine dell'uomo (1871). Sullo sfondo dell'Inghilterra vittoriana, da questa completa e suggestiva biografia Darwin emerge come un genio tranquillo e riservato, come uno scienziato consumato da un'impellente necessità di comprendere la complessità delle forme viventi attraverso un costante lavoro di osservazione e di sperimentazione.

Viaggio di un naturalista intorno al mondo Charles Darwin, 2010-11-22 Edizione integrale Nel 1831, Charles Darwin si imbarcò, in qualità di naturalista, a bordo del brigantino Beagle per partecipare a una spedizione che, per citare le sue stesse parole, «ha determinato la mia intera carriera». *Viaggio di un naturalista intorno al mondo* descrive la sua spedizione di cinque anni - in particolare lungo le acque costiere del Sud America. Mentre viaggiava attraverso Paesi inesplorati raccogliendo esemplari di piante e animali, Darwin iniziò a formulare le teorie dell'evoluzione e della selezione naturale, sviluppate in modo definitivo nella sua opera principale, *L'origine delle specie*. Affascinante resoconto di un'avventura straordinaria e insieme agile manuale scientifico, *Viaggio di un naturalista intorno al mondo* è una vivida introduzione alle idee di uno dei più autorevoli pensatori della storia. Dopo essere stato respinto per due volte da un forte vento di sudovest, il Beagle, un brigantino armato di dieci cannoni e comandato dal capitano FitzRoy della Royal Navy, è finalmente salpato da Devonport il 27 dicembre 1831. Charles Darwin nacque nel 1809 a Shrewsbury da una famiglia legata per tradizione professionale alle scienze naturali. Studiò medicina a Edimburgo e teologia a Cambridge, finché nel 1831, superando le resistenze del padre, riuscì a imbarcarsi come naturalista a bordo del Beagle per un viaggio durato cinque anni che costituì l'avvenimento più importante della sua formazione. Nel 1838 la lettura del Saggio sui principi della popolazione di Malthus gli fornì l'idea per quella teoria della «selezione naturale» che tanto peso avrebbe avuto sul pensiero scientifico e filosofico. Morì nel 1882. La Newton Compton ha pubblicato *L'origine delle specie*, *L'origine dell'uomo* e la selezione sessuale; *L'espressione delle emozioni nell'uomo e negli animali*; *Viaggio di un naturalista intorno al mondo* e il volume unico *L'origine delle specie*, *L'origine dell'uomo* e altri scritti sull'evoluzione.

Psychobiological Footprints through Human Development Livio Provenzi, 2024-08-08 Embark on an illuminating voyage through the biological foundations of human nature and development with *Psychobiological Footprints through Human Development*. This unique volume unveils the intricate dance between genetics, neuroscience, and environment, offering a holistic understanding of how we become who we are. This comprehensive book examines the psychobiological, neuroendocrine, and epigenetic mechanisms that regulate developmental processes in typical development and under conditions of developmental risk. Moving within a dynamic systems epistemic framework and capitalizing from the heritage of the infant research field, it provides a solid framework for comprehending the interplay of nature and nurture. With a captivating blend of theoretical principles, processes, and contextual applications, this book transcends academic boundaries

to empower anyone interested in the intricacies of human development. Psychobiological Footprints through Human Development is a guide to discovering how our life experiences contribute to making us who we are and therefore it is invaluable to graduate students in the fields of developmental psychology, neuroscience, genetics, and related disciplines. Delving into the biological roots of behaviour, cognition, and emotion, it will also equip practitioners, researchers, and educators with invaluable insights to enrich their practice.

Charles Darwin J. David Archibald, 2018-12-15 Charles Darwin: A Reference Guide to His Life and Works provides an important new compendium presenting a detailed chronology of all aspects Darwin's life. The extensive encyclopedia section includes many hundreds of entries of various kinds related to Darwin - people, places, institutions, concepts, and his publications. The bibliography provides a comprehensive listing of the vast majority of Darwin's works published during and after his lifetime. It also provides a more selective list of publications concerning his life and work. Includes a nearly year by year chronology detailing Charles Darwin's life, family, and work. The A to Z section includes many entries on concepts and people important in Charles Darwin's life and his work, emphasizing during his lifetime but extending somewhat backwards and forwards from there. The bibliography includes all of Charles Darwin's articles and books published in his lifetime in English and other languages, as well as a selective list of works about him and his work. The index thoroughly cross-references the chronological and encyclopedic entries.

Evoluzione e vita in Schopenhauer e Bergson Valentina Baccelli, 2016-03-09 La vita: un buco nero al centro dell'indagine scientifica e filosofica che fin dall'alba dei tempi attanaglia l'uomo. Da dove veniamo? Una domanda classica, con una duplice risposta: quella evoluzionistica e quella creazionistica. Ma serve per forza un Dio per comprendere la nostra esistenza? Siamo proprio sicuri che la filosofia non possa intrecciarsi con l'indagine scientifica a opera, per esempio, di Charles Darwin? Valentina Baccelli compie un'indagine innovativa e accurata attraverso la quale il padre dell'evoluzionismo, il Copernico dell'Ottocento, non risulta completo e speculato a tutto tondo senza due figure che apparentemente poco hanno a che fare col mondo della scienza: Bergson e Schopenhauer. Quello che viene offerta è un'indagine profonda del pensiero degli autori e un nuovo modo di intendere il concetto di vita, attraverso un'unione fra le scienze e la filosofia.

Chi siamo, da dove veniamo Charles Darwin, 2022-10-26T00:00:00+02:00 Chi siamo? Da dove veniamo? Non ci è dato

saperlo, ma Darwin ci era andato abbastanza vicino. Darwin fu sicuramente un rivoluzionario, ma non tanto per il concetto di evoluzione, di cui fu in realtà più erede e diffusore che non ideatore, quanto per l'affermazione del cambiamento come necessità incessante, biologicamente benefica e connaturata all'esistenza. A due secoli di distanza, la teoria dell'evoluzione si rivela ancora irriducibile a ogni piano progressista e consolatorio, all'ideale di una scienza che muove su percorsi lineari; i suoi principi confutano tuttora i pregiudizi più radicati nel pensiero occidentale e l'idea della benevolenza del creato, del suo ordine e di un progetto supremo e l'illusione che la natura possenga una struttura prevedibile con un percorso interpretativo, e renda dunque possibile un suo controllo e dominio. Questa breve antologia raccoglie brani fondamentali da L'origine della specie e L'origine dell'uomo, da Viaggio di un naturalista intorno al mondo e dal manoscritto Darwin-Wallace.

L'evoluzione del lavoro Ugo Rabbeno, 1883

I tordi beffeggiatori Luciana Brandi, Clotilde Barbarulli, Ubaldo Ceccoli, 2017-01-16 «Ascoltando il frastuono assordante dei torrenti e rievocando tutte le razze animali che si sono estinte e avvicinate sulla faccia della terra», Darwin in viaggio sulla Beagle inizia quel percorso che lo farà approdare alla teoria dell'evoluzione per selezione naturale, punto di riferimento della Rivista di Filosofia Scientifica nata con lo scopo di rinnovare la cultura italiana attraverso la diffusione delle teorie darwiniane mettendo in discussione l'antica separazione fra scienza e filosofia. Dai precursori della teoria dell'evoluzione di Darwin alla biografia del termine evoluzione sino alla sua applicazione all'universo naturale, dall'analisi del concetto collegato di progresso sino al rapporto tra scienza e filosofia, vero leitmotiv della Rivista, il volume ricostruisce percorsi e contenuti di questo progetto culturale, fondato sull'intersezione fra saperi diversi. Il lavoro, reso possibile dalla creazione di una banca dati, vero e proprio archivio della memoria polifonica del tempo, è un esempio di come simili archivi possano rappresentare progetti strategici capaci di contrastare il frastuono assordante di ogni egemonia monoculturale.

Gli Esopianeti Umberto de Angelis, 2022-12-31 "Come è nata la vita sulla Terra? C'è vita anche altrove nel sistema solare? Cosa sono gli esopianeti e come li scopriamo? Quanti potrebbero ospitare forme di vita?" Domande come queste sono tra le più frequenti e stimolanti quando ci si interroga sugli avvincenti misteri dello Spazio; in questo saggio, il professor Umberto de Angelis le approfondisce per fornire spiegazioni esaurienti e risposte chiare. Nel corso di pochi anni e in una determinata frazione dell'Universo, il ritmo di scoperta degli esopianeti ci rende consapevoli della presenza accertata di sistemi planetari e, date le opportune condizioni, anche della nascita di forme di vita su di essi. Ci sono miliardi di pianeti nell'Universo, nella zona abitabile delle loro stelle, dunque esso pullula di vita ma c'è da chiedersi quante sono le probabilità di comparsa di una specie come quella dell'Homo sapiens, con il suo percorso di vita, il suo linguaggio e la sua intelligenza. Dalle sfere cristalline agli infiniti mondi, giungendo ad analizzare la vita degli extra-terrestri nel sistema solare, i processi fisico-chimici che portano alla formazione degli amminoacidi, gli esopianeti e le forme di vita probabili, l'autore ci guida in un coinvolgente

percorso verso la conoscenza.
