

# Derivative Of A Hyperbolic Function

Mark Steyvers

**Introduction to Derivatives - Math is Fun** The process of finding a derivative is called "differentiation". You do differentiation ... to get a derivative. **Derivative - Wikipedia** A partial derivative of a function of several variables is its derivative with respect to one of those variables, with the others held constant. Partial derivatives are used in vector calculus and differential geometry. **What is a Derivative? Visual Explanation with color coded ...** Just like a slope tells us the direction a line is going, a derivative value tells us the direction a curve is going at a particular spot. At each point on the graph, the derivative value is the slope of the tangent line at that point. **Derivative Calculator • With Steps!** The Derivative Calculator lets you calculate derivatives of functions online — for free! Our calculator allows you to check your solutions to calculus exercises. It helps you practice by showing you the full working (step by step differentiation). **Derivatives: Definition, Rules, and How to Calculate Them** May 28, 2025 · The derivative measures the rate of change of a function at a point, representing the slope of the tangent line to the curve at that point. **Derivative Calculator - Symbolab** Free derivative calculator - differentiate functions with all the steps. Type in any function derivative to get the solution, steps and graph **Derivatives: how to find derivatives | Calculus | Khan Academy** The big idea of differential calculus is the concept of the derivative, which essentially gives us the direction, or rate of change, of a function at any of its points. Learn all about derivatives and how to find them here. [Derivatives - Calculus, Meaning, Interpretation - Cuemath](#) A derivative in calculus is the instantaneous rate of change of a function with respect to another variable. Differentiation is the process of finding the derivative of a function. **Derivative | Definition & Facts | Britannica** Jul 25, 2025 · Derivative, in mathematics, the rate of change of a function with respect to a variable. Geometrically, the derivative of a function can be interpreted as the slope of the graph of the function or, more precisely, as the slope of the tangent line at a point. **Derivative - Math.net** For a function to have a derivative at a given point, it must be continuous at that point. A function that is discontinuous at a point has no slope at that point, and therefore no derivative.
